

According to Texas State Law, TAC 331.62 (1) construction standards for all Class 1 Injection Wells must meet specific criteria, including..."all well materials must be compatible with fluids with which the materials may be expected to come into contact."

This is Texas State Law, but Texcom did NOT perform compatibility tests. Their position was that they did not have contracts in place for waste disposal, so they did not know what fluids to test. However, Texcom's recent letter to shareholders, states they have added new clients, for waste disposal, to an *existing* list of over 200 clients.)

However, and more importantly, the TCEQ did not require Texcom to perform compatibility tests, **CONTRARY TO STATE LAW**, *because this law is not in the TCEQ's regulations*.

Read the letter from Governor Rick Perry's office, and take note in the second paragraph, which states..."governor is confident....that the TCEQ commissioners will rule on the application in accordance with state and federal laws"....

Write Governor Perry and ask him; since the TCEQ has failed to require this applicant to meet state code, how confident is he that they have followed **all** the state and federal laws in this and "any other permit"? Tell him you do not share his confidence and you want him to STOP THE TOXIC WELLS and to oppose Texcom's application for a Class 1 Injection Well in Montgomery County.
